

Name: Anthony John M. Trinidad
Course & Year: BSIT 4J

Dashboard.

The screenshot shows the AWS Educate dashboard. At the top, there's a navigation bar with 'aws educate' logo and links for 'Courses & labs', 'Jobs', and 'Emerging Talent Community'. The user's name 'Anthony John Trinidad' is displayed. Below the navigation bar, a large teal banner reads 'Your cloud journey starts here' with the text 'No matter your goal, we've gathered the most useful content to build your cloud skills.' To the right of the banner is an 'Explore' section with a feedback form and a list of courses enhanced with new AI modules. Below the banner, there's a 'Filters' section on the left with options for Course Features, Skills, Level, Duration, and Language. A search bar is also present. The main content area displays 'Getting Started' courses: 'Introduction to the AWS Management Console' (1 hour), 'Introduction to Cloud 101' (3 hours), and 'Getting Started with Storage' (2 hours). A '1/3' indicator is shown. At the bottom, there's a footer with 'FAQ', 'Contact us', 'Cookie preferences', and copyright information for 2026.

Services for Compute, Storage, and Networking.

The screenshot shows the AWS Educate course page for 'Getting Started with Compute'. The page has a dark sidebar on the left with navigation links: Home, Modules, Lucid (Whiteboard), Courses, History, and Help. The main content area is titled 'Getting Started with Compute' and includes a description of the course, its focus on Amazon Elastic Compute Cloud (Amazon EC2), and the course level. The course level is described as a foundational level for learners beginning with cloud computing and AWS services. On the right side, there are buttons for 'View Course Stream', 'View Course Calendar', and 'View Course Notifications'. Below these, there are sections for 'To Do' (Nothing for now) and 'Recent Feedback' (Nothing for now). The footer at the bottom shows the date '7/26/2026' and the time '5:34 PM'.

Getting Started with Networking

Computer networking refers to interconnected computing devices that can exchange data and share resources with each other. These networked devices use a system of rules, called communications protocols, to transmit information over physical or wireless technologies. Modern-day network solutions deliver more than connectivity. They are critical for the digital transformation and success of businesses today.

Amazon Virtual Private Cloud (Amazon VPC) is a service that lets you provision a logically isolated section of the AWS Cloud (called a virtual private cloud, or VPC) where you can launch your AWS resources. Amazon VPC gives you control over your virtual networking resources, including the selection of your own IP address range, the creation of subnets, and the configuration of route tables and network gateways.

In this course, you acquire the knowledge you need to start using Amazon VPC. You learn about the key elements of Amazon VPC and explore how to configure them. You learn how to set up security for VPC and learn about other AWS networking services.

Course level

This is a foundational level course which is written for learners beginning with cloud computing and AWS services. When you start this course you don't need to have a deep knowledge of cloud computing. If you have more knowledge of cloud computing you may still find this course helpful in refreshing your knowledge and practicing your skills.

It would be helpful for your learning if you have a basic understanding of cloud computing concepts and the AWS Management Console. AWS Educate supports this background with courses which include:

- Introduction to the AWS Management Console
- Introduction to Cloud 101

Getting Started with Storage

When you consider running your workloads on Amazon Web Services (AWS), you might first consider your storage options. AWS storage provides the services that you need to build the storage solution that's right for your business. You will review the primary storage types and the differences between them. You will also learn how to identify the right solution in the cloud based on your requirements.

You will then focus on Amazon Simple Storage Service (Amazon S3), an object storage service that offers industry-leading scalability, data availability, security, and performance. Customers of all sizes and industries can use Amazon S3 to store and protect any amount of data for a range of use cases. These use cases include websites, mobile applications, backup and restore, archive, enterprise applications, Internet of Things (IoT) devices, and big data analytics.

In this course, you acquire the knowledge that you need to start using Amazon S3. You learn about the key elements of Amazon S3 and explore how to configure them. You learn how to upload data to Amazon S3 and what additional AWS services you can use to transfer data to Amazon S3 at scale. You also learn the basic elements of security within Amazon S3.
